

Former St. Louis Shriners Hospital Patients with X-Linked Hypophosphatemia (XLH) or Hypophosphatasia (HPP)

Shriners Hospitals for Children – St. Louis, Center for Metabolic Bone Disease and Molecular Research (the Research Center) seeks our former patients at least 21 years of age or older with X-Linked Hypophosphatemia (XLH) or Hypophosphatasia (HPP) to return to our facility for a research study.

The purpose of the study is to learn about XLH and HPP during adult life. The study involves taking a medical history, physical exam, x-rays, bone density, quality of life questionnaires, blood and urine collections, and DNA studies. This will be a single outpatient visit that will last approximately one and a half days. Overnight accommodations at Haven House will be provided.

- ♥ Study-related exams and tests will be provided at no charge.
- ♥ No compensation is provided for this study.

For more information please contact:
